	<b>Examiner</b> John Bastianelli	<b>Art Unit</b> 3753	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The examiner would like to note that an information disclosure statement has not been filed.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taylor et al. US 4,462,568 in view of Height et al. US 6,929,235.

Taylor discloses an adjustable sealing device for preventing the leakage of a substance contained in a containment device, said adjustable sealing means having a cover 42 having an aperture and means to fasten the cover onto the containment device body, a sliding cam 28, a generally circular seal 30 or 60, a generally circular thrust collar 29 between the cam and the seal and means to actuate said cam 40 wherein the linear movement of the actuating means creates vertical movement of the cam. Taylor lacks rotational movement of the cam. Height discloses a rotatable cam 100' and 112' having angular portions. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the sliding cam of Taylor with the rotational cam of Height in order to use less force to move the cam due to increases mechanical

advantage as well as simple substitution. Taylor discloses the cam actuating means being a single bolt. Taylor lacks a cam position indicator. Height discloses graduations 158 that are usable as cam position indicators. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the cam position indicators of Height on the valve of Taylor in order to more accurately know the position of the valve. Taylor discloses the containment device being a plug valve.
